ONYM Group enters into a strategic partnership with Sherbrooke OEM and accelerates its industrial deployment

A Québec industrial alliance placing the circular economy and the valorization of residues at the heart of economic development

Montréal, ***May 20, 2026***

ONYM Group today announces a strategic partnership with Sherbrooke O.E.M. Ltd., a recognized Québec industrial equipment manufacturer, which is investing in the company. This alliance accelerates the industrial deployment of ONYM's technology, which produces bioenergy and bioproducts that enable heavy industries to reduce their greenhouse gas emissions.

This alliance marks a decisive milestone for ONYM Group. It enables the company to accelerate its transition to continuous production and to structure the deployment of its first commercial-scale plant. Sherbrooke OEM brings capital, recognized manufacturing expertise and direct access to a network of industrial clients across Canada and the United States.

"This alliance goes beyond a capital contribution. It confirms the strength of our technology in the eyes of a seasoned industrial manufacturer and gives us the means to accelerate production at scale. We are gaining a partner who shares our conviction that today's residual biomass is tomorrow's resource*."*

— Yvon Nadeau, President and CEO, Co-founder of ONYM Group

ONYM Group produces bioenergy and bioproducts that enable heavy industries to reduce their greenhouse gas emissions while remaining cost-competitive with fossil fuels. The partnership with Sherbrooke OEM strengthens this value proposition on both the manufacturing and commercial fronts.

"Our alliance with ONYM Group combines two complementary contributions. On one hand, we are putting our manufacturing capacity and our industrial installation expertise at ONYM's disposal, which are essential to large-scale deployment. On the other hand, our network of sorting facility operators across Canada and the United States opens up concrete commercial opportunities for ONYM with clients seeking to give a second life to their wood residues. We are investing both capital and expertise, convinced of the commercial potential of this sector."

— Alain Brasseur, President, Sherbrooke O.E.M. Ltd.

This transaction marks the second major investment in ONYM Group, following the one made by Fondaction, the Fonds économie circulaire and Innovitech in November 2021, which enabled the deployment of the showcase plant in Montréal-Est. Five years later, the arrival of Sherbrooke OEM opens a new phase: industrial deployment.

About ONYM Group

ONYM Group is a Québec-based company that produces bioenergy and bioproducts contributing to the decarbonization of heavy industries at a cost competitive with fossil fuels. Founded in 2016, the company operates a showcase plant in Montréal-Est that transforms forestry and urban wood residues into four high-value co-products: pyrolysis oil, biochar, wood vinegar and renewable gases. These products replace heating oil, coal and natural gas in steelmaking, cement production and other high-temperature industrial processes. ONYM Group's development is supported by private financial partners and by federal and provincial government programs. groupeonym.com

About Sherbrooke O.E.M. Ltd.

Established in Sherbrooke since 1997, Sherbrooke O.E.M. Ltd. designs, manufactures and installs industrial equipment for the sorting and recycling of residual materials. Its installations equip major operations across Canada and the United States, diverting substantial volumes of residues from landfill each year toward valorization pathways.
